Evergreen Trees

"We dream of vistas 'mid the crowding snows,
With Evergreens along the northern line—
The Pines and Cedars when the cold wind blows
Through all their branches with a constant whine."

EVERGREEN trees when received from the Nursery are balled and burlapped. Our experience proves to us that Evergreens handled this way (B&B) can be planted as soon as the frost leaves the ground in Spring, and right through the Summer and Fall until the ground is frozen again.

When planting Evergreens, dig the hole eight to ten inches larger than the ball, and about one inch deeper. Remove burlap and set tree in the hole. Step back and see if the plant is straight and placed to the best advantage in relation to other plants and surroundings. Now fill the hole almost full of soil, and then fill with water. After the water has soaked down, fill completely with soil and tramp it down until it is firm and level.

At all times keep the soil cultivated. In dry weather, water at intervals of seven to ten days. Water thoroughly and see that it penetrates well down to the roots. Watering a little every day does more harm than good. Evergreens will grow in any good garden soil. Use fertilizer sparingly.

ABIES concolor. *White Fir.* 50-75 ft. A superb showy lawn specimen of stately, symmetrical growth. Foliage green to grayish blue.

Dwarf Evergreens for Foundation Planting

NO planting about the entrance of a home can compete with one of Evergreens. Shrubbery is effective and of great beauty during the Spring and Summer, but with the coming of Fall, the forlorn appearance of "gone by" comes and stays for six months.

There are low growing types of Evergreens, many of which retain their dwarf form for a decade or longer. They are to be chosen, for a growth of plant material which barricades the windows, shutting out air and sunshine, is very undesirable.

Plants should be placed not nearer than two feet from the wall, and a space of at least three feet apart, for a crowded plant turns brown. The taller plants are more effective in the background, with the low bushy ones in front. The taller growing ones may be used to advantage, too, as accent points.

Even dwarf varieties need pruning in June of every year. That month is the best, for the new growth has been made, and enough growth will take place after the pruning to obviate the unnatural sheared appearance.

Ordinarily, Evergreens need no watering after they are well established. If a continued drought should occur, a thorough soaking once in seven to ten days is necessary.

The following Evergreens are suggested as suitable for use in Foundation Plantings:

Chamaecyparis obtusa gracilis
Chamaecyparis obtusa nana
Chamaecyparis pisifera filifera
Chamaecyparis pisifera filifera aurea
Chamaecyparis pisifera plumosa
Chamaecyparis pisifera plumosa argentea
Chamaecyparis pisifera plumosa aurea
Chamaecyparis pisifera squarrosa
Juniperus japonica albovariegata
Juniperus japonica pfitzeriana
Juniperus communis aurea
Juniperus communis hibernica
Juniperus communis suecica compacta

Juniperus excelsa stricta
Juniperus horizontalis douglasi
Juniperus sabina
Picea glauca conica

Rhododendrons

The climax in beauty and sheer loveliness is reached in this family. These broad-leaved evergreens have glossy, long, tapering and richly green leaves. Their blossoms are luxuriantly massed in clusters of fresh, delightful colors. Along paths or drives, or as informal plantings for garden or lawn, they give the utmost pleasure.

They ask one thing in return, that they be planted in a decidedly acid soil. We can help you make sure of this.

Hybrid Rhododendrons. *Named colors.* 3-8 ft. These plants are grown from seeds of Hybrid Rhododendrons. They grow much stronger and bushier than the grafted Hybrids and are perfectly hardy.

Dutch Peat

We recommend the use of Dutch Peat for both Fine and Broadleaved Evergreens.

\$3.00 per bale; \$2.70 per bale from 5 to 10 bales.

Deciduous Trees

DECIDUOUS TREES can be planted as soon as the frost is out of the ground, and continued until late May, or in the Fall after two or three frosts, until the ground has frozen. In planting Deciduous Trees, dig the hole large enough so that the roots may be laid out straight, and deep enough so the tree will be about 1 inch deeper than it was planted in the nursery, which is shown by the collar on the trunk. While filling in the soil, shake the tree gently up and down and then tramp the earth in firmly. Soak thoroughly. It is advisable to have guy wires on the tree for the first year until the roots become firmly established, as the swaying of the tree may disturb them.

PLANT A TREE THIS YEAR AS A WASHINGTON MEMORIAL.

Flowering Shrubs

THERE is nothing which gives greater return for money expended than this group. Most shrubs are showered with color—the golden yellow of the Forsythias, purest white of the Spirea—the blue of the Syringa—deep red of the Weigelas—or mass of brilliant blooms of the Azaleas. They are invaluable as screens, boundaries, or in foundation plantings, either used alone or with Evergreens.

Shrubs, like deciduous trees, may be planted as soon as the frost is out of the ground until late May, and again in the Fall after two or three frosts, until the ground is frozen.

When Shrubs are received from the nursery they are in a dormant condition. The plant should be placed in the ground immediately, for if the roots dry out it will die.

The hole into which the plant is placed should be wide enough so that the roots lie flat. Fill in the soil, shaking the plant gently up and down to sift the soil around the roots, and firm it thoroughly. After a thorough soaking with water, the Shrub needs no further attention except the general care of fertilizing and pruning each year.

May we give a word of caution about pruning? The best time to prune Shrubs is right after the blooming season. Cut out all dead and old wood. Most shrubs flower on the new growth so this should not be removed.

Lilacs should be pruned only once every six or seven years, and then cut back hard.

Nothing benefits a Shrub more than proper pruning. When done correctly, you will be rewarded with a wealth of blooms.

HYBRID LILACS

Too few of us appreciate the hybrid and improved varieties of Lilacs. Unlike the white and purple kinds long familiar to us, they bloom when very small plants, and can be kept in fairly limited space. It is a small garden that has no room for an assortment of these splendid shrubs.

Hardy
Perennials

Hints for Successful Culture

USUALLY the best effects are obtained by planting Perennials in groups of not less than three. A few of the more robust Perennials, such as the Peony or Dicentra spectabilis are effective as individual specimens. The area being planted will determine the size of the groupings. Most Perennials may be planted in early Spring, from the time the frost is out of the ground until late June, or from the middle of September to the first of November. For the new bed, spade to a depth of 1½ feet, and incorporate a generous supply of well decayed manure with an application of bonemeal. Old beds should be renewed every three years. Plants should be taken out of the ground and divided. The bed should be spaded up, fertilized, and the plants returned. While Perennials grow in poor soil, yearly fertilizing will insure fine, sturdy plants, and constant cutting of the flowers, continuous bloom. A careful selection of an assortment of varieties, and a little attention will reward you with bloom from early Spring until very late Fall.

“And, oh my garden speaks the love
Of upward reaching things

Whose magic in the sunshine gives
My soul the sense of wings.”
—ELIZABETH D. HOLLADAY.

Roses

Suggestions for the Culture of Roses

"A sweeter flower did nature ne'er put forth"

—WILLIAM BROWNE

A SUCCESSFUL Rose Garden is the goal of every grower of flowers. They thrive best in a garden where the morning sun reaches them. Excavate to a depth of 2 feet, place a layer of cow manure on the bottom and fill with good top soil, building the bed to a height of 4 inches above the ground level.

Space Hybrid Tea Roses 18 inches, and Hybrid Perpetuals 2 feet apart, thus allowing plenty of room for the roots to spread out. All Roses should be planted so the place where they are grafted or budded is 3 inches below the surface. Tramp in firmly and water well. Keep the ground well mulched. To secure the most perfect blossoms, cut each flower when the bud is opening.

Cut the plants back in the Fall after two or three frosts and cover them during the Winter months. Roses should be uncovered in the early Spring and pruned again severely. The addition of manure and cultivation at this time will help you obtain perfect flowers.

**Strong, field grown plants, 2 years old: 75c. each,
5 or more of one kind at 65c. each,
unless otherwise noted**

If we are out of the variety ordered, we shall select the variety most closely resembling it *unless otherwise advised*.

Greenhouse Department

"I pluck thy blossoms, not thy mystery"

IN this catalog we would like to emphasize our Greenhouses. Many of our customers do not know that we have over 15,000 square feet under glass. Our specialty is Carnations. At the present time we have propagated three new varieties which are attracting nation-wide interest among Carnation growers. These have already won many prizes and awards of merit.

In addition to Carnations, we have in their season Chrysanthemums, Freesias, Stevia, Snapdragon, the new beautiful Blue Iris, Calla Lilies, Calendulas, Roses, Calla Lily Begonias, Echeverias, and a general line of Potted Plants.

Every Spring we have thousands of Annuals in many colors and varieties. Our collection this Spring will be one of the finest in this section of the country. We list below some of the varieties we will have.

The Greenhouse, also, has a fast enlarging Cut Flower Department, completely equipped to meet our patrons' needs for Bridal Arrangements, Decorations for Home or Church, and all other floral tributes and gifts, such as Sprays, Baskets, Wreaths, Bouquets, etc.

Prices on the following depends on size and variety. Write for quotations.

AGERATUM, Blue Perfection. Large flowered mauve; free blooming.

MANY times we have been asked: "Do you have Native Plant Material?" Our answer is, emphatically—Yes! For your quick reference and convenience, we list below the more important Native Plants carried in our Nurseries. These are all nursery grown. This means each plant has been several times transplanted, insuring a fine fibrous root system—your assurance that the plant will live and grow when transplanted to your garden.

We will gladly send information and quotations on any other Native Plants not mentioned in this list which you may be interested in.

GAZING GLOBE

Nearly every person can obtain some wonderful experiences by gazing at a spherical mirror. It produces a fascinating and deep-reaching effect and Orientals claim to see into the future. These gazing globes are imported and are made of the finest heavy weight glass lined with silver giving a permanent glitter that will never tarnish. All the air has been removed from the interior, forming a vacuum, thereby assuring absolute protection from air expansion by heat or cold which, with the ordinary globe will cause tarnishing and corrosion.

Diameters of globes are as follows:

8" Silver Gazing Globe
 (without pedestal)
 Ea. \$ 8.25

10" Silver Gazing Globe
 (without pedestal)
 Ea. 13.00

12" Silver Gazing Globe
